

PROJECT: ANIMALS

What are vertebrate animals?

Vertebrates all have a skeleton. Birds, mammals, amphibians, fish and reptiles are vertebrates.

They have different **body coverings**.

feathers

fur

bare skin

scales

Write the letters in the skeleton:

A worksheet for identifying vertebrates. It shows five animals labeled A through E: A (snake), B (bird), C (fish), D (badger), and E (frog). Below each animal is a corresponding skeleton diagram with a small white circle below it for labeling.

There are 5 groups of vertebrates:

mammals

amphibians

reptiles

fish

birds

Match the animal with the group:

amphibian

fish

mammal

bird

reptile

Vertebrate animals move in different ways.

They fly.

They slither.

They swim.

They walk.
