**Fraction Practice**

**A. Write the fraction below as an improper fraction.**

$$9\frac{2}{3} =$$

$$10\frac{3}{4} =$$

$$7\frac{3}{4} =$$

**B. Write the fraction below as a mixed number.**

$$\frac{19}{7} =$$

$$\frac{37}{12} =$$

$$\frac{22}{9} =$$

**C. Simplify each fraction to its lowest terms.**

$$\frac{32}{48} =$$

$$\frac{36}{45} =$$

$$\frac{63}{77} =$$

**D. Fill in the box with a number which would make each pair of fractions equivalent.**

$$\frac{3}{4} = \frac{\quad}{24}$$

$$\frac{14}{20} = \frac{7}{\quad}$$

$$\frac{5}{\quad} = \frac{30}{54}$$

**E. Add or Subtract. Write answers in lowest/simplest terms.**

$$\frac{2}{6} + \frac{5}{6} =$$

$$\frac{2}{3} - \frac{1}{3} =$$

$$\frac{6}{10} + \frac{4}{10} =$$

$$\frac{9}{12} - \frac{3}{12} =$$

$$\frac{6}{8} + \frac{7}{8} =$$
