LIVEWORKSHEETS

Is a natural disaster natural?

A natural disaster is the effect of a natural hazard-flood, tornado, hurricane, volcanic eruption, earthquake, heat wave, landslide, avalanche, tsunami or forest fire. It leads to financial, environmental or human losses. The resulting loss depends on the vulnerability of the affected population to resist the hazard, also called their resilience. This understanding is concentrated in this formulation: disasters occur when hazards meet vulnerability. Thus a natural hazard will not result in a natural disaster in areas without vulnerability, e.g. strong earthquakes in uninhabited areas. The term natural has consequently been disputed because the events simply are not hazards or disasters without human involvement.

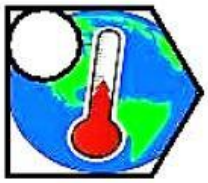

The highlighted words are synonyms to these

1.happen=_____
2.danger=_____
3.accountability=_____
4.argued=_____
5.flexibility=_____

List the natural hazards mentioned in the text and match to the pictures

1._____
2._____
3._____
4._____
5._____
6._____
7._____
8._____
9._____
10._____

Answer the questions

1.What is a natural disaster? _____
2.What can a natural disaster cause? _____
3.What does the loss depend on? _____
