

# Ukuran Pemusatan Data

Menghitung Mean (Rata-Rata) berdasarkan Tabel Distribusi Frekuensi

## Rumus Rata-Rata Biasa

$\bar{x}$  = Nilai rata-rata

$$\bar{x} = \frac{\sum f_i x_i}{n}$$

$f_i$  = Frekuensi

$x_i$  = Nilai tengah

$n$  = Total frekuensi atau data

## Tabel Distribusi Frekuensi Berat Badan

| Nilai   | $f_i$ | $x_i$ | $(f_i) \cdot (x_i)$ |
|---------|-------|-------|---------------------|
| 53 - 57 | 2     |       |                     |
| 58 - 62 | 4     |       |                     |
| 63 - 67 | 5     |       |                     |
| 68 - 72 | 8     |       |                     |
| 73 - 77 | 4     |       |                     |
| 78 - 82 | 3     |       |                     |
| 83 - 87 | 3     |       |                     |
| 88 - 92 | 1     |       |                     |
| Jumlah  |       |       |                     |

## Kesimpulan
