

The DNA STRUCTURE

Cell Membrane

Jelly-like fluid that hold everything together

Centriole

Control what enter and exit

Nucleos

Brain's cell

Lysosome

are filled with water and other molecules

Golgi Apparatus

contains digestive enzymes

Nucleolus

the site of protein synthesis

Ribosome

very important for cell division

Cytoplasm

A center of ribosome synthesis

Vacuoles

helps process and package proteins and lipid molecules

Mitochondria

Powerhouse, provide energy
