

Science

These are the stages in the life cycle of a bean plant.

The stages are in the wrong order. Put them in the right order.

flower

seedling

bean pod

adult plant

seed

II. Drag the parts of the flowers to its description.

Petals

Stigma

Anther

Filament

Stamen

Ovary

Sepals

Carpel

This makes a powder called pollen

The male part of the flower

The stalk of the anther

This is often brightly coloured to attract insects to the flower.

Little green leaves that protect the flower bud

The female part of the flower.

This contains tiny eggs.
