CHECKPOINT 2

Practical Activity A - (15 marks)

Based on Activity 11 Unit 2 P24

A sports team has 4 players and wants to collect data on them. Create a program to save and output data on the names and ages of the players on the team.

Your code must

1. Ask a user to input 4 names.
2. Ask a user to input 4 ages.
3. Output the 4 names and ages.

FILL IN THE BLANKS USING THE OPTIONS GIVEN:

name1	name2	name3	name4	value1	value2	value3	value4
int	input	int	input	print	name1	value1	value4

_____ = input("Who is the first player?")

value1 = _____(input("What is the player's age?"))

_____ = input("Who is the second player?")

_____ = int(input("What is the player's age?"))

name3 = _____("Who is the third player?")

value3 = int(input("What is the player's age?"))

name4 = input("Who is the fourth player?")

value4 = _____(_____("What is the player's age?"))

print(_____, "is", _____, "years old.")

_____(name2, "is", value2, "years old.")

print(_____, "is", _____, "years old.")

print(_____, "is", _____, "years old.")
