

# Producers, consumers, and decomposers

## Grade 3 Science Worksheet

All living things need energy. Depending on how they get their energy, living things are either producers, consumers, or decomposers.

**Producers** make their own energy from sunlight, air, and soil.

**Consumers** cannot make their own energy. They must eat other living things.

**Decomposers** break down and eat dead plants and animals.

Write producer, consumer, or decomposer for each living thing.

1. grass
