

# Endangered Species: Animals in Danger of Extinction

**Listen and watch carefully this video about endangered species and choose the most suitable answer.**

Well there are some animals that are about to disappear completely, like the \_\_\_\_\_ (1), lynxes, whales, \_\_\_\_\_ (2), tortoises, even bees are close to being extinct!

But... What can we do to \_\_\_\_\_ (3)?

The first thing is learning lots of things about them! :

The more we know about animals, the more we will love them, because they are so great!

They are so \_\_\_\_\_ (4) and \_\_\_\_\_ (5)! Some of them are so much \_\_\_\_\_ (6)!

If we threw this small \_\_\_\_\_ (7) into the ocean, it could mean the death of some sea creature, like a \_\_\_\_\_ (8) or a \_\_\_\_\_ (9).

This seal has eaten plastic thinking it was food. Sadly the poor thing will probably die.

Do you realise how important it is to take care of nature?

Another way of taking care of nature and saving animals, is consuming in an \_\_\_\_\_ (10) manner.

If we do all these things, nature will be \_\_\_\_\_ (11) and animals will live longer, and better lives! And they will never ever ever become \_\_\_\_\_ (12).

We all fit in this world, the Earth is our home, and home to all other \_\_\_\_\_ (13)!

Will you help us take care of it? I hope you do!

Goodbye Happy friends!

I hope you're always ready to learn!

Goodbye
