Read the texts. Read the questions and then answers:

1. Why do most of the Earth's rain and snow originally come from the ocean?

2. Water vapor in the air is called what?

3. The water vapor rises and condenses, turning into what?

4. What will happen when the clouds gather more water vapor than they can hold?

5. After the water turns to rain or snow, it falls back to Earth where some of it goes back into oceans, rivers, and lakes and the cycle begins again. This is called what?

6. What will happen without the warmth of the sun?

LIVEWORKSHEETS

7. Why does the sun make all life on Earth possible?
