

Math Worksheet
Unit - 9 : Geometry (Book Pg. 162)

9.1 Relationships between angles.

Facts to Remember.

1. When two straight lines cross each other:

- a. They meet at a point called intersection point X.**
- b. A set of angles are formed.**
- c. These angles add up to 360°**
- d. Two of the angles next to each other add up to 180°**
- e. Vertically opposite angles are formed ($a = c$ and $d = b$)**

2. Angles at a point add up to 360° .

3. A straight angle measures 180° .

Angles that add up to 180° are called **supplementary**.

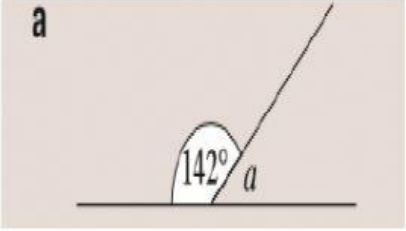

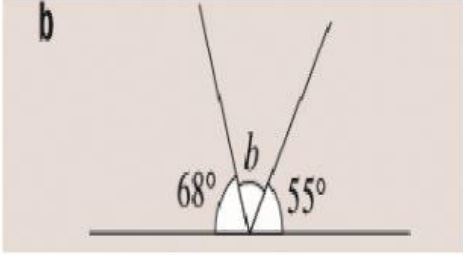

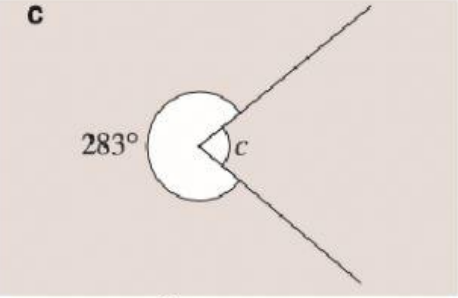

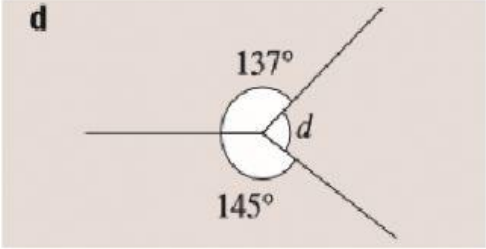

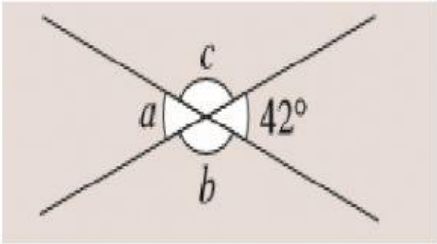

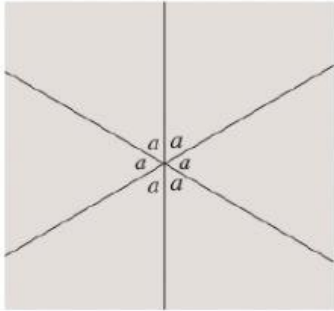

4. A corner measures 90° .

Angles that add up to 90° are called **complementary**.

2. Calculate the missing angles a, b, c and d.

<p>a</p>  <p>a = 0</p>	<p>b</p>  <p>b = 0</p>
<p>c</p>  <p>c = 0</p>	<p>d</p>  <p>d = 0</p>
<p>e.</p>  <p>a = 0</p> <p>b = 0</p> <p>c = 0</p>	<p>f.</p>  <p>a = 0</p>

3. Work out the missing angles x and y.

a.

$y = 0$

b.

$x = 0$

$y = 0$

c.

$x = 0$

d.

$y = 0$

e.

$y = 0$

f.

$x = 0$

g.

$x = 0$

h.

$x = 0$
