

Name: _____

Seed is the part of the plant from which a new plant can grow. Different plants grow from different seeds. The new plants look like the plants the seeds came from. When old plants die, their seeds can be planted to grow new plants. Seeds can be classified or grouped according to their shape, size and color.

Choose true or false.

1. The seed is the part of the plant from which a new plant grows.

True

False
