Second Industrial Revolution
LIVEWORKSHEETS

The Second Industrial Revolution started in 1870,
just after the completion of the transcontinental railroad
in the United States.
The Second Industrial Revolution ended in 1914.
The Second Industrial Revolution includes the telephone,
the modern lightbulb, an increase in
electrical power, airplanes, automobile, assembly line,
air brakes, petroleum refining,
the telegraph, the modern typewriter, and the tractor,
and the first skyscraper in Chicago, Illin

LIVEWORKSHEETS

The Second Industrial Revolution led to an increase in factories, and many people in the lower class suffered from long work hours and dangerous working conditions.

The increase in production also led to economic prosperity for industry leaders.
