

Use short division to find the answers. Divide the remainders to give fractions. Simplify the fractions where you can.

1  $7407 \div 6 = \square$

8  $4988 \div 9 = \square$

2  $2423 \div 7 = \square$

9  $8324 \div 6 = \square$

3  $8746 \div 4 = \square$

10  $3170 \div 8 = \square$

4  $5182 \div 8 = \square$

11  $9151 \div 4 = \square$

5  $2273 \div 7 = \square$

12  $4126 \div 6 = \square$

6  $4118 \div 9 = \square$

13  $2766 \div 8 = \square$

7  $6522 \div 8 = \square$

14  $4799 \div 7 = \square$

**THINK**

2 3 4 6 8 9

If you divide a mystery 4-digit number by any of these values there is no remainder. What is the mystery number?

 I am confident with using short division and giving remainders as fractions.
