THE BANK THAT WAS SENT THROUGH THE POST OFFICE

The U.S. Post Office allows its customers to mail many things besides letters. A customer can send plants, insects, some types of live animals (0) _____. A direct marketing research company once mailed a football, a hammer, and even a water ski, with just a stamp (9) _____, just to see what would happen. But the strangest thing sent through the mail was a bank. And not a child's piggy bank, (10) _____.

Of course, the whole bank couldn't be sent through the mail system, (11) _____. But the next best thing was mailed – all of the bricks used to construct the bank, all 80,000 of them.

Mr. W. H. Coltharp, a young businessman in the town of Vernal, Utah, wanted to build a bank (12) _____. The bricks which he selected for the building were made by a company located about 120 miles away from the town by straight line, (13) _____. Coltharp's problem was that the cost to transport 80,000 bricks from Salt Lake City to Vernal was too high, so he decided to mail the bricks to the small town through the cheap parcel post service.

He had the bricks carefully packaged in boxes, each of them weighing less than 50 pounds, the upper limit of what the post office permitted. News reports show (14) _____, equivalent to one ton.

Finally, all the bricks were delivered, but the postmasters got so angry (15) _____. From then on people could only send or receive a total of 200 pounds of goods in a single day. The Bank of Vernal was built (16) _____ "The Parcel Post Bank" by some people in the town. The building still exists and is still used as a bank.

'IMPOSSIBLE' EXAM QUESTION LEAVES CHINESE STUDENTS PUZZLED

Primary school students at a school in China had this question on a test: "If a ship has 26 sheep and 10 goats on board, how old is the ship's captain?"

The question caused a heated debate on Chinese social media. "This question makes no logical sense at all. Does the teacher even know the answer?" Some, however, defended the school, saying, "This question forces children to explain their thinking and gives them space to be creative. We should have more questions like this."

The local Education Department says the test was intended to "examine the ability to think independently." The traditional Chinese method of education heavily emphasises note-taking and repetition, which critics say doesn't encourage creative thinking.

And, of course, there's always that one person who has the right answer. "The total weight of 26 sheep and 10 goats is 7,700kg, based on the average weight of each animal. In China, if you're driving a ship that has more than 5,000kg of cargo, you need to have had a boat license for five years. The minimum age for getting a boat license is 23, so he's at least 28."

The other reason is that people are not (5) _____ (*necessary*) ready to change."

Psychologists at the College recently proposed that, for something positive to happen, people must have the capability, opportunity and (6) _____ (*motivate*) to make it happen. "Often people aren't making resolutions for the right reasons," says Gardner: "They think that because it's New Year, they're (7) _____ (*expect*) to say they'll change their behaviour. But once they (8) _____ (*real*) the difficulty of what they're doing, they give up because they aren't motivated enough in the first place."
