

REALICE LOS SIGUIENTES EJERCICIOS EN SU CUADERNO VIEJITO Y
ESCRIBA LOS RESULTADOS EN LOS CASILLEROS EN BLANCO.

1. Realice las siguientes operaciones combinadas

$$\frac{6}{5} + \frac{3}{2}x \frac{2}{6} \div \frac{5}{9} - \frac{1}{2}$$

$$\frac{6}{5} + \underline{\quad} - \underline{\quad} = \frac{12 + \underline{\quad} - \underline{\quad}}{\underline{\quad}} = \underline{\quad} \text{ simplificando queda } \underline{\quad}$$

$$\sqrt{\frac{49}{81} \div \frac{14}{9} + \frac{5}{3}x \frac{6}{15} - \left(\frac{1}{3}\right)^2}$$

$$\underline{\quad} \div \frac{14}{9} + \underline{\quad} - \underline{\quad}$$

$$\underline{\quad} + \underline{\quad} = \underline{\quad} + \underline{\quad} - 2 = \underline{\quad}$$

$$\left[\left(3 + \frac{5}{4}x \frac{8}{20} \right) + \sqrt[3]{\frac{216}{27}} \right]$$

$$[(\underline{\quad} + \underline{\quad}) + \underline{\quad}]$$

$$[\underline{\quad} + \underline{\quad}] = \left[\frac{\underline{\quad} + \underline{\quad}}{\underline{\quad}} \right] = \underline{\quad} \text{ simplificando queda } \underline{\quad}$$

$$\left(\frac{7}{4}x \frac{16}{21} \div \frac{8}{3} \right) - \left(\frac{9}{8} - \frac{3}{4} \right) + \left(\frac{1}{2} \right)^3 + \sqrt{\frac{16}{9}}$$

$$\underline{\quad} + \underline{\quad} + \underline{\quad} = \frac{12 - \underline{\quad} + \underline{\quad} + \underline{\quad}}{\underline{\quad}} = \underline{\quad}$$

simplificando queda —
