Angles and inclined lines

When **two straight lines meet at a point**, it is called an **angle**.
The **point of intersection between these lines** is called the **vertex**.
The lines creating the angle are called the **arms** of the angles as Angles are measured in degrees, and the symbol used to represent an angle is

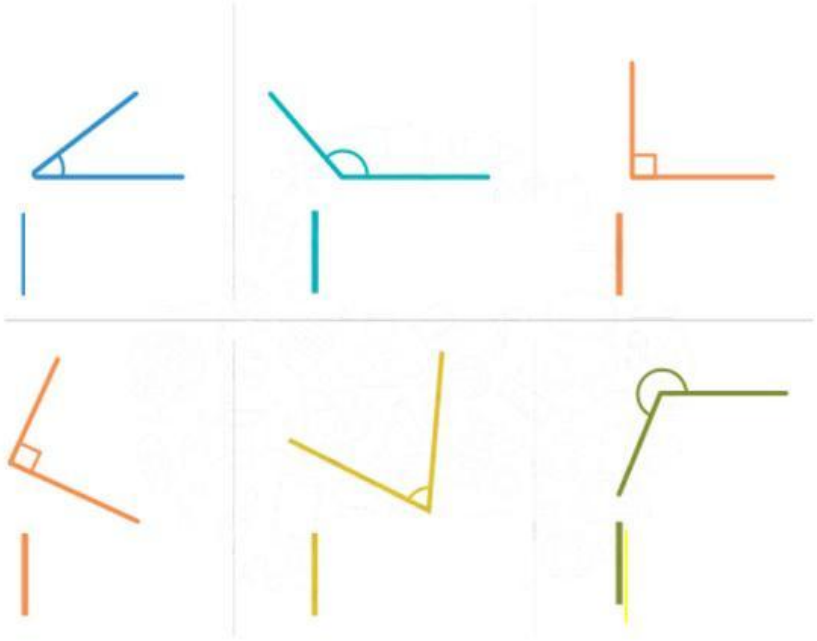

Vertex

arm

angle

Label each of these angles as either acute, right, obtuse or reflex.

Right

Obtuse

Acute

Reflex

Acute
