

## Angles and inclined lines

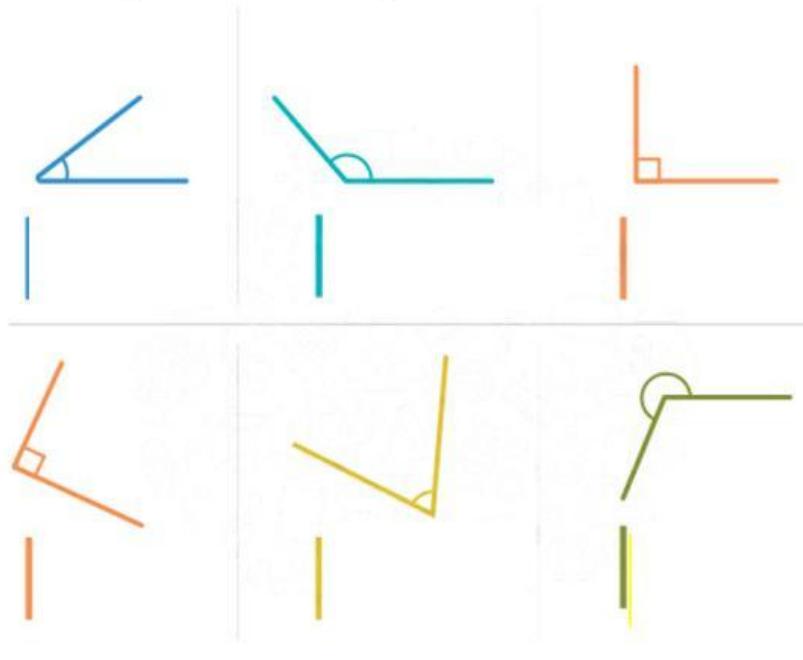

When **two straight lines meet at a point**, it is called an **angle**.

The **point of intersection between these lines** is called the **vertex**.

The lines creating the angle are called the **arms** of the angles as Angles are measured in degrees, and the symbol used to represent an angle is

Label each of these angles as either acute, right, obtuse or reflex.

**Right**

**Obtuse**

**Acute**

**Reflex**

**Acute**

**Right**
