| _____ 7. If I go out to eat, | g. I hope you will be involved. |
| _____ 8. If vegetables sit in the field, | h. save the rest for tomorrow. |

"Insects anyone?"

There's a popular saying: We eat with our eyes. This may be why so few people choose to eat insects—they think insects are ugly creatures. Yet, there are many good reasons to eat insects. They are more nutritious than other meats, and they don't have diseases that people can get from animals. If we increase the number of insects and decrease the amount of meat we eat, we will be healthier. We need much less space and less food to farm insects than to raise cows or sheep. Also, there are over 1,000 edible insects all around the world, and you can cook them any way you want: boil, steam, fry, grill, or bake. Finally, the most shocking of all is that you are already eating them. Insects are in many foods you buy from the supermarket. For example, a bar of chocolate may have 60 insect parts per 100 grams in it. And, if you already eat them, why not have more? Many people even say they are tasty

Read the sentence and decide if it is true or false.

According to the text, one reason people might avoid eating insects is that they consider insects to be ugly creatures.	TRUE	FALSE
The text suggests that insects are less nutritious than other meats.	TRUE	FALSE
According to the text, increasing the consumption of insects while decreasing meat ingestion could contribute to better health.	TRUE	FALSE
farming insects requires more space and food compared to raising cows or sheep.	TRUE	FALSE
There are only a few edible insect varieties around the world.	TRUE	FALSE
According to the text, some processed foods from the supermarket may already contain insect parts, such as a bar of chocolate with 60 insect parts per 100 grams.	TRUE	FALSE
