

Solutions

1. Complete the following information

Solutions are homogeneous mixtures. They have two components:

- _____ or dissolved substance
- _____ or dissolving substance

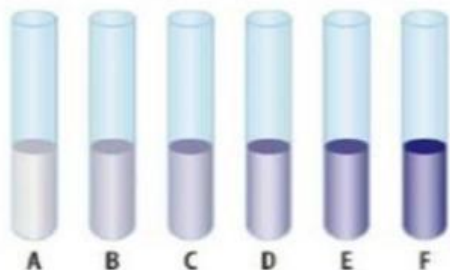

The first one is, in general, in a _____ proportion; while the second one is in a _____ proportion.

Solutions that have quite a high concentration of solute are called _____.

When the solute concentration is low, they are called _____.

2. About the image, answer the following questions:

- Which solution has more solute?
- Which is the more concentrated one?
- Which is the more diluted one?
