Animal communication

It (0) sometimes said that animals use language. Certainly some animal species have developed amazingly sophisticated ways of communicating with (9) another.

But there are huge differences between the ways animals communicate and the ways human beings do. When animals make a sound, such (10) a bark or a call, it is in reaction to (11) is happening around them. An alarm call means they are frightened. A hunger call means they want food. Animals, though, cannot make a call meaning 'I was scared yesterday' or 'I'll be hungry tomorrow'. Only human beings are capable (12) doing this.

Zoologists have had some success in teaching human language to animals. (13) some famous experiments, chimpanzees have (14) taught to use their hands to give information on a range of things. Some animals have even managed to put signs together in (15) to make simple sentences. However, getting them to do this takes a huge (16) of training.
