

Drag and drop the descriptions into the correct area above, which are similar or different between prokaryotic and eukaryotic cells

Similarities

Eukaryotic cell

Prokaryotic cell

DNA in the nucleus

DNA in the cytoplasm

It has ribosomes

It has cytoplasm

It has cell membrane

It has nucleus

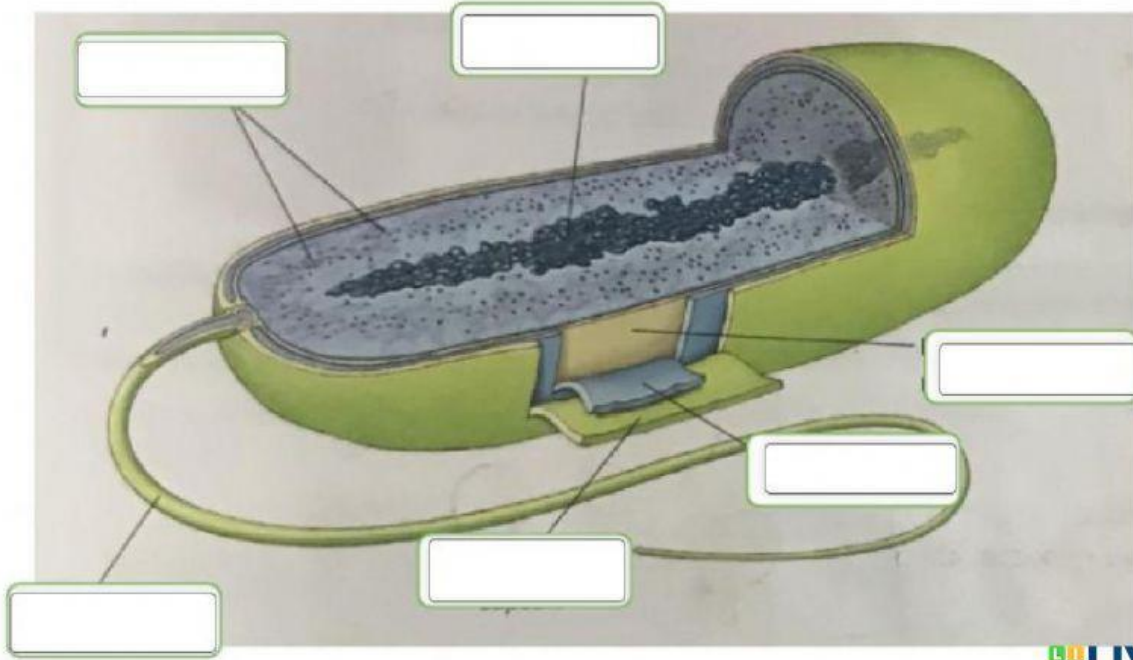

It has not nucleus

It has different organelles

It is simple

It is complex

Drag and drop the parts of the prokaryotic cell

Genetic material

Cell wall

Cytoplasm

Flagellum

Capsule

Cell membrane

Prokaryotic cells live in extreme environments for that reason is necessary that the cells possess:

- a. Flagellum, because it helps to protect against predators**
- b. Cytoplasm, because it helps to separate the inside and outside substances**
- c. Ribosomes, because it helps to create some important substances**
- d. Cell wall, because it helps to protect against from outside conditions**

Write the letter of the correct answer
