

## HOW TO RIDE A BIKE

A bicycle is a simple and wonderful machine that helps us travel. It has a comfy seat called a saddle where you sit. To direct, you use the handlebars. At night, a light on the bike helps us see.

To stop the bicycle, we use the brake. It's like pressing a button to slow down or stop. The bicycle also has gears that help it move smoothly. Gears are like different speeds – you can change them to make riding easier on hills or faster on flat roads.

So, when you ride a bicycle, you sit on the saddle, hold the handlebars to direct, use the brake to stop, and sometimes change the gears to pedal more comfortably. It's lots of fun!

1. What is the name of the seat of the bike?

- a) Basket
- b) Wheel
- c) Saddle

2. To \_\_\_\_\_ the bike, we use the brake.

- a) Ride
- b) Stop
- c) Change

3. If you want to direct the bike, you have to use the...

- a) Break
- b) Handlebars
- c) Gears

4. Sometimes you have to change the gears to....

- a) Stop the bike
- b) Direct the bike
- c) Go faster on flat roads

5. Can you travel by bicycle?

- a) Yes, you can.
- b) No, you can't

6. Is it fun to ride a bicycle?

- a) Yes, it is.
- b) No, it is not.
