

EXPERIMENT 4: REACTIONS OF ALIPHATIC AND AROMATIC HYDROCARBONS

***** POST LAB EXPERIMENT 4 *****

RESULTS

Match the answer by using suggested answer given by drag and drop and complete the sentences given.

Cyclohexene is alkene that undergoes electrophilic addition reaction with the present of C-C double

Toluene is arene that undergoes free radical substitution reaction with the present of benzylic hydrogen

Cyclohexane is alkane that undergoes free radical substitution with the present of sunlight.

Cyclohexane is alkane cannot undergo oxidation reaction bond.

Cyclohexene is alkene can undergo oxidation reaction by the present of C-C double bond.bond.

Toluene is arene can undergo oxidation reaction by the present benzylic Hydrogen.

Test	Hydrocarbon	Observation	Deduction
A) Bromine test	Cyclohexane	<u>Test tube with wrap</u> Reddish brown colour of bromine solution _____.	
		<u>Test tube without wrap</u> Reddish brown colour of bromine solution _____.	

EXPERIMENT 4: REACTIONS OF ALIPHATIC AND AROMATIC HYDROCARBONS

Cyclohexene	<u>Test tube with wrap</u> Reddish brown colour of bromine solution _____.	
	<u>Test tube without wrap</u> Reddish brown colour of bromine solution _____.	
Toluene	<u>Test tube with wrap</u> Reddish brown colour of bromine solution _____.	
	<u>Test tube without wrap</u> Reddish brown colour of bromine solution _____.	

EXPERIMENT 4: REACTIONS OF ALIPHATIC AND AROMATIC HYDROCARBONS

B) Baeyer's Test	Cyclohexane	Purple colour of KMnO_4 solution remain unchanged.	
	Cyclohexene	Purple colour of KMnO_4 solution decolorized.	
	Toluene	Purple colour of KMnO_4 solution decolorized..	

EXPERIMENT 4: REACTIONS OF ALIPHATIC AND AROMATIC HYDROCARBONS

DISCUSSION

A) Bromine in CH_2Cl_2

i) Cyclohexane is a _____ (saturated/ unsaturated) hydrocarbon that undergoes _____ reaction only in the presence of _____

ii) Which of the following is chemical equation bromination of cyclohexane.

EXPERIMENT 4: REACTIONS OF ALIPHATIC AND AROMATIC HYDROCARBONS

- iii) Cyclohexene is an _____ (saturated/ unsaturated) hydrocarbon that can easily undergoes _____
- iv) Which of the following is **chemical equation bromination of cyclohexene under sunlight & in the dark**)

reaction in sunlight

EXPERIMENT 4: REACTIONS OF ALIPHATIC AND AROMATIC HYDROCARBONS

v) Which of the following is **chemical equation bromination of cyclohexene in the dark**)

reaction in dark

EXPERIMENT 4: REACTIONS OF ALIPHATIC AND AROMATIC HYDROCARBONS

vi) Toluene undergoes _____

Chemical equation bromination of toluene.

EXPERIMENT 4: REACTIONS OF ALIPHATIC AND AROMATIC HYDROCARBONS

B) BAEYER'S TEST

_____ and _____ undergoes oxidation while _____ cannot be oxidised.

Cyclohexene is oxidized to form _____

Toluene is oxidized to form _____

i) Chemical equation oxidation of cyclohexane.

ii) Chemical equation oxidation of cyclohexene.

EXPERIMENT 4: REACTIONS OF ALIPHATIC AND AROMATIC HYDROCARBONS

ii) Chemical equation oxidation of toluene
