- Take sleeping tablets
- Use alternative medicines
- Herbal medicine
- Homeopathy
- Follow a low-carb diet
- Have a full health check
- Take vitamin supplements
- Aromatherapy
- Acupuncture
- hypnotherapy

Do you remember having a bruise, rash, a blister or stiches?

When do you have an injury, do you prefer using a bandage, a dressing or a plaster?

Have you ever avoided wearing a plaster cast or a sling?

Can you stand using crutches? How many time have you used them?

Do you tend to have flu? And a cold?

How can you avoid food poisoning? Talk about it

Do you think it is common to suffer from asthma in big cities?

What might prevent you from having a stroke or heart attack?

When do you risk getting side effects?

... although I was very sceptical about it, I really do think it made the difference.

You only ever hear anecdotal evidence that it has worked for individual people.

So, I thought, why not give it a go?

Sadly, it had not effect on me whatsoever.

People underestimate the risk.

The advantages outweigh the disadvantages.
