

Activity 8

Observe Like a Scientist

Digestive System

Why is digestion important?

Explain how the mouth helps digest food?

Compare and contrast the digestion that takes place in the stomach, small intestine, and large intestine

STOMACH	وحدة إدارة مش المدارس المصرية اليابانية
SMALL INTESTINE	الفريق التعليمي
LARGE INTESTINE	

ANSWERS BANK

- The mouth breaks up food mechanically by chewing , the teeth and tongue also break down the food with the help of saliva

In the stomach, food is broken down into smaller pieces and juices are added to make liquid.

- The digestive system breaks down the food so the body can use it for energy.

the small intestine absorbs the food nutrients to move into the blood

The large intestine absorbs the water from the liquid.
