Possible solutions
Brief

Making a prototype of the drone based on the chosen design idea.
Learning how drones are made, what other drones are on the market, and drones' key features.
Completing drawings of two or more potential designs and outlining the advantages and disadvantages of each.
Creating a mind map to help structure the information and generate new ideas.
Deciding on the best design for the drone.
Designing a fully autonomous drone that will be able to safely deliver small packages to Noon customers in the UAE.
Reflecting on the completed project and overall design process and suggesting improvements.
