5. Serious. _____

DANGEROUS FOODS?

Everyone knows that chopping onions can make you cry. It's because onions release a **toxic** gas when you cut them or fry them. When the gas gets into your eyes, your body produces tears to wash it out. So, next time you chop an onion, do it under a running tap. If you cut the onion under running water, the gas won't get into your eyes.

Did you know that peanuts are poisonous for dogs and can be very dangerous for humans too, if you are allergic to them? Even the smallest piece of peanut can cause a very bad reaction. If one day you have an **allergic reaction** to a peanut, you will need to get to a hospital as quickly as you can.

The 'fugu' is the world's most poisonous fish – and it's also one of the most expensive. It's a **delicacy** in Japan, but eating the tiniest drop of the toxins in its **intestines** can kill you! Specially trained fugu chefs learn how to slice the fish very carefully to avoid any contamination. If you are ever in Japan and want to try fugu fish for yourself, you'll have to be very careful. You'll need to make sure you go to a restaurant that has a 'fugu-certified' chef, unless you want it to be your last supper!

Garlic has a lot of positive qualities. Throughout history people have believed that it has powerful medicinal uses. It can also protect you from mosquito bites. I always get mosquito bites in summer, so when I go on holiday this year, I'll make sure I eat lots of garlic. But don't put fresh garlic on the bites! Fresh garlic is very strong and a slice of garlic can give you a **severe** burn if it is in contact with your skin!
