

HOW DO WE REPRESENT THE EARTH?

1. Read the sentences about globes and maps and write T (for true) or F (for false).

- A globe is a flat representation of the Earth.
- The Equator is an imaginary line that divides the Earth into two halves.
- The poles are the extreme west and east points of the Earth's axis.
- The Earth's axis is an imaginary line on which the Earth spins.
- Maps are spheres that show the Earth on a much smaller scale.
- World maps show the entire planet.

2. Look at the map and its elements. Drag and drop the names next to the correct pictures.
