

Simplify $3 : \frac{1}{4}$

To reduce ratios with fractions
Multiply all numbers by **the denominator**

$$3 \times 4 : \frac{1}{4} \times 4$$

$$12 : 1$$

Simplify $\frac{2}{3} : \frac{4}{5}$

If there are two denominators
Multiply all numbers by the **L.C.D.**
The **Lowest Common Denominator**

$$\frac{2}{3} \times 15 : \frac{4}{5} \times 15$$

$$2 \times 5 : 4 \times 3$$

$$10 : 12$$

$$5 : 6$$

Simplify $\frac{2}{3} : \frac{4}{5}$

If there are two denominators
You can also multiply by both **denominators**
It is advisable to multiply by the **largest denominator first**

$$\frac{2}{3} \times 5 : \frac{4}{5} \times 5$$

$$\frac{10}{3} : 4$$

$$\frac{10}{3} \times 3 : 4 \times 3$$

$$10 : 12$$

$$5 : 6$$
