

Performance Level (PL)	Achieved	Not yet achieved
PL 4: Provide reasoning on the importance of skeletal system and blood circulatory system in human body.		

II. Fill in the blanks with the correct answers to explain the blood circulatory pathways in the human body.

- While breathing, the air with more oxygen enters the \_\_\_\_\_ and is absorbed into the \_\_\_\_\_.
  - This blood is known as the \_\_\_\_\_. This blood enters the heart and is then pumped into the whole \_\_\_\_\_.
  - Once the human body uses the oxygen in the blood, the \_\_\_\_\_ that is produced is then absorbed into the blood.
  - This blood is known as \_\_\_\_\_. This blood is taken to the \_\_\_\_\_ and then pumped into the lungs.
  - The lungs will remove the carbon dioxide during \_\_\_\_\_.
12. Fill in the blanks with the correct answers on the importance of the human blood circulatory system. [PL4] ▶ ▶ [LS.223]
- Transports \_\_\_\_\_, \_\_\_\_\_ and \_\_\_\_\_ to the whole body.
  - Transports \_\_\_\_\_ and other \_\_\_\_\_ to be eliminated from the body.
13. In your opinion, what would happen if the lungs were unable to eliminate carbon
