

GUESS THE PLANET

Эврика отправляется в путешествие по Солнечной системе и на всякий случай собирается освежить в памяти основную информацию о восьми планетах, входящих в ее состав. Правда, кто-то стер названия планет из англоязычной энциклопедии, поэтому Эврике никак не справиться без вашей помощи! Прочитайте описания и помогите установить, о какой из планет идет речь в каждом фрагменте.

_____ is fourth in number to the Sun and is a neighbour of the Earth. It is called the Red Planet because its appearance is red from the outside. The temperature of _____ varies from extremely cold to extremely hot. _____ can be seen from the telescope as a red spot in the universe.

What planet is this?

_____ is the last planet in the Solar System. It is made up of ice particles only and that is why it is bright blue in colour. _____ was named after the Roman God of the Sea and _____ ends the solar family of the Milky Way. _____ takes the longest time for one single revolution around the Sun as it is the farthest planet in the Solar System. It is the only planet that is not visible to the naked eye from earth. It is more than 30 times larger than the earth.

What planet is this?

_____ is the fifth planet in the solar system and is also called the 'Jumbo Planet'. It is the largest planet in the solar system and over 300 Earths can take place on its surface. It is made up of gases like helium and hydrogen and is also called a 'Gas Planet'. _____ has 79 moons making it the most number of satellites. _____ is a gas giant planet. Galileo gave its first detailed description in 1610.

What planet is this?

____ is the smallest planet in the Solar System. ____ is the hottest planet in the Solar System because it is the closest to the Sun. ____ takes 88 days to complete one round around the Sun. It is almost impossible to go near ____ as it is like a huge ball of gas.

What planet is this?

____ is the sixth planet and is also the second largest planet in the Solar System. ____ is made up entirely of gases. It is the only planet that has a ring around it and is called a 'Ring Planet'. The ring of ____ is made up of rocks and gases only. It is known for its beautiful rings around its equator.

What planet is this?

____ is the second planet in the Solar System from the Sun. It is Earth's neighbour with Mars. It is the only planet that spins in the opposite direction to all the other planets in the solar system. It is also very hot and the temperature can rise to 450 degrees Celsius. ____ is covered with volcanoes and takes 243 earth days to complete one rotation.

What planet is this?

____ is the only planet that has life, air, water, human beings, animals, plants, etc. ____ is the third planet and is unique in nature. It takes 365 days to complete one revolution around the Sun. It also takes around 24 hours to finish one rotation which results in day and night. The satellite of ____ is called the Moon. ____ is our home and it is the only planet suitable for life.

What planet is this?

____ is the seventh planet and is also the second last planet in the Solar System. ____ is the coldest planet in the system with an average temperature of -225 degrees Celsius. ____ spins on its side, unlike all the other planets. ____ experiences the nights for around 21 years with extreme winters.

What planet is this?
