

# INSTITUTO NACIONAL "BENJAMÍN ESTRADA VALIENTE"

student's name:\_\_\_\_\_ Group\_\_\_\_\_

Date:\_\_\_\_\_ Score:\_\_\_\_\_

Objective: Assess student's selective listening by listen to short audios with specific information and facts.

Instructions: In each question, you are going to find a short audio, listen to it and write TRUE or FALSE.

1- The human brain weighs approximately 5 pounds (2.3 kilograms) on average.

2- There are approximately 86 billion neurons in the human brain.

3- Neurons communicate using chemical signals.

4- The brain consumes about 10% of the body's energy.

5- The brain's storage capacity is virtually limitless, capable of holding multiple terabytes of information.

6- The brain is less active during REM sleep compared to wakefulness.

7- The brain can process an image that your eyes see for as little as 13 milliseconds.

8- Each person's brain anatomy is identical to everyone else's.

9- The brain continues to develop and change well into adulthood.

10- The amygdala is responsible for processing emotions like fear and aggression.
