

Lesson topic: Equivalent fractions. Reducing fractions.
HOMEWORK (Due in a week)

1. Revise the old words and learn the new ones.

Equivalent fractions	$\frac{1}{3}$  $\frac{2}{6}$ 	Reduce / simplify	$\frac{30}{42} \div 6 = \frac{5}{7}$
		Compare	$\frac{1}{5} < \frac{1}{2}$

2. Find **equivalent** fractions.

1) $\frac{5}{-} = \frac{1}{5}$

11) $\frac{5}{6} = \frac{15}{-}$

2) $\frac{-}{30} = \frac{1}{5}$

12) $\frac{1}{3} = \frac{-}{12}$

3) $\frac{1}{4} = \frac{-}{16}$

13) $\frac{3}{-} = \frac{1}{4}$

4) $\frac{4}{8} = \frac{2}{-}$

14) $\frac{2}{-} = \frac{10}{25}$

5) $\frac{-}{6} = \frac{6}{18}$

15) $\frac{4}{6} = \frac{2}{-}$

6) $\frac{4}{5} = \frac{-}{15}$

16) $\frac{-}{10} = \frac{1}{5}$

7) $\frac{6}{-} = \frac{3}{4}$

17) $\frac{-}{15} = \frac{2}{3}$

8) $\frac{1}{2} = \frac{2}{-}$

18) $\frac{5}{-} = \frac{25}{30}$

9) $\frac{-}{15} = \frac{1}{5}$

19) $\frac{2}{4} = \frac{-}{16}$

10) $\frac{-}{2} = \frac{4}{8}$

20) $\frac{-}{4} = \frac{4}{8}$
