

Determine the highest common factor of

(a) 18 and 24

(b) 36, 60 and 72

(c) 48, 64 and 80

(a)

	18, 24

Thus, the HCF of 18 and 24 is $\square \times \square = \square$

(b)

	36 , 60 , 72

Thus, the HCF of 36, 60 and 72 is $\square \times \square \times \square = \square$

(c)

	48, 64, 80

Thus, the HCF of 48, 64, 80 is $\square \times \square \times \square \times \square = \square$
