

MOTION (1 D & 2 D)

Q 1) A ball is thrown vertically upwards with an initial speed u from a height h above the ground. The ball eventually hits the ground with a speed v . the acceleration due to gravity is g and the air resistance is negligible.

What is the average speed of the ball

And average velocity of the ball

over its entire trajectory?

a) $\frac{u^2 + v^2}{2(u+v)}$

b) $\frac{u+v}{2}$

c) $\frac{gh}{u+v}$

d) $\frac{gh}{2(u+v)}$

Q2) Time taken by an object falling from rest to cover the height of h_1 and h_2 is respectively t_1 and t_2 .

Then $t_1 : t_2$

:

(Hint: drag and drop)

h_1

h_2

$\sqrt{h_2}$

$2 h_1$

$2h_2$

$\sqrt{h_1}$

Q3) There are three smooth wires PP₁, PP₂ and PP₃ tightly stretched on a vertically fixed ring of radius R . three beads A,B and C are free to slide on these wires. If the beads start from the point P, to reach P₁,P₂ and P₃ along the three paths.

Click on the right statements

- ☐ a) Average speed of the beads are equal.
- ☐ b) They reach their respective destinations in equal time.
- ☐ c) The final velocities are directly proportion to cosine angle with the vertical.
- ☐ d) Acceleration of beads are identical in magnitude.

Q4) A bird flies for 4s with a velocity of $(t-2)$ m/s in a straight line, where t = time in seconds. It covers a distance of

2 m 4 m 6 m 8 m
