Andrew is having his friends over for game night. So, he decided to prepare snacks and games.

1. He started by making FUN BURGERS. If he has 12 friends coming over and he made 4 BURGERS for each one of them, how many burgers did he make?

2. He also made some LEMONADE from fresh lemons. If he used 8 lemons per pitcher of juice and he made 6 pitchers of juice, how many lemons did he use?

3. Then he started to prepare the games for his 12 friends. If each game takes 5 minutes to prepare and he prepared a total of 8 games, how many minutes did it take for Peter to prepare all the games?

4. Peter's 12 friends decided to bring food as well. If each of them brought 8 sandwiches and 4 bags of chips, how many sandwiches do they have in total?

5. Lastly, Peter was adding up his expenses for the game night. If he spent $14 for each game they played and they played a total of 8 games, write an equation for how much money he spends on games that night?
