**Fill in the blanks with "is' or 'are'.**

The gecko ___ a very unique and colourful lizard. It can be found in many habitats, usually in warm climates. The gecko ___ an omnivore. It likes to feed on fruits and insects.

The gecko makes noises such as chirping, barking and clicking when it feels threatened or to attract its mate. Besides that, its tail has special features that help it to balance its weight as they climb branches and to store fat. The tail also helps it to camouflage itself. If a predator attacks, the gecko will shed off its tail.

Most geckos ___ noctural, which means they ___ active at night. A female gecko lays its eggs in leaves and barks. One interesting fact ___ that most geckos do not have moveable eyelids. They keep their eyelids clean by licking it with their tongue.
