

- 1 Stephano is setting up vases of flowers on tables for a party. The vases hold 6 flowers each. There are 7 round tables, 14 square tables, and 8 rectangular tables. If he puts one vase of flowers on each table, how many flowers does he need?
- 2 Jake and his friends picked apples in an orchard. Jake picked 14 apples, Anna picked 20 apples, Alejandro picked 16 apples, and Noemi picked 22 apples. They decided to share them equally among the 4 of them. How many apples did each person get?
- 3 Enrique made 56 pies. He gave 29 of them away. He sold the rest of them for \$5 each. How much money did he get for the pies he sold?
