Read the following passage and mark the letter A, B, C or D on your answer sheet to indicate the correct answer to each of the questions.

A recent investigation by scientists at the US Geological Survey shows that strange animal behavior might help predict future earthquakes.

Investigators found such occurrences in a ten-kilometre radius of the centre of a fairly recent earthquake. Some birds screeched and flew about wildly. Dogs yelped and ran uncontrollably.

Scientists believe that animals can perceive these environmental changes as early as several days before the disaster.

In 1976 after observing animal behavior, the Chinese were able to predict a terrible earthquake. Although hundreds of thousands of people were killed, the government was able to evacuate millions of people and thus keep the death toll at a lower rate.
