

Name: _____ Grade: _____

Reading Test:

The Monarch Butterfly

Every year, millions of monarch butterflies make an incredible journey. These butterflies travel from Canada and the United States to Mexico. They travel thousands of kilometers to reach their destination.

The monarch butterflies face many problems on their journey. The weather can be bad, and sometimes there is not enough food. However, they always find their way.

Monarch butterflies have four stages in their life: egg, caterpillar, chrysalis, and adult butterfly. The whole process takes about a month. The generation that migrates lives longer, up to eight months.

It is important to take care of the monarch butterflies because their numbers are decreasing. Planting milkweed and creating butterfly gardens are ways to help.

Questions:
