Mam, How did you make this model of the Eiffel Tower?

Well, it was very easy, I will explain you. **First of all** I drew with pencil two big A-shape sides with a wide base on a cardboard. **Next** I drew half circle on the base of each of these sides, the **front** and **back** side of the tower. **Then** I cut them with scissors. **As soon as** I drew the internal parts of these sides, I cut them out. **Later** I drew and cut two long strips of cardboard to make the other two sides of the tower. **After that**, I assembled the four sides joining them using glue and adhesive tape. **Before** painting the edges and triangles of the tower with a black marker, I wrapped the structure using aluminium foil. **At this point** I made the flag of France using a toothpick and a piece of white fabric where I painted a blue and red strip and placed it on the **top** of the tower.

**Last but not least** I measured, drew and cut a piece of cardboard to make the base of the tower. **To conclude**, I decorated the base painting roads and gardens and **also** placing there figures of people and cars that I made **previously** using salt dough.
