## Naturally Better Homes

5 In the 1970s, many people became concerned about energy. People had to face up to the fact that they used too much energy, and energy sources were not going to last forever. One **architect**, Michael Reynolds, decided to do something. He set out to design homes that were cheaper to build and more energy efficient. In addition, he  
5 wanted to do something about all the garbage. Finally, he came up with the idea of "earthships."

10 Although it sounds like a boat, an earthship is a house. However, unlike regular houses, earthships are constructed from garbage and are built using only ten percent of the energy needed to build a typical house. Moreover, after they are built, earthships use  
10 only ten percent of the energy required to heat, light, and cool a regular home. Although earthships sound unique, they can actually be built to look just like any other house.

15 One of the big benefits of earthships is that they are made from recycled materials. The main construction material of an earthship is used **tires** that are filled with dirt. The dirt-filled tires are then laid flat and stacked like bricks. Because the tires are round,  
15 there is lots of extra space between the **columns** of tires. These spaces are filled with used cardboard. The tires and cardboard form the outside walls of an earthship. The inside walls between rooms in the earthship do not need to be as strong as the outside walls; therefore, the inside walls are made with old cans, bottles, and cement that are eventually covered and painted to look just like walls in a typical home.

Another benefit of an earthship is that it saves energy and natural resources. For example, an earthship uses less water. Rain water, which is collected on the roof, is used for drinking and bathing. Furthermore, earthships need much less energy for heating and cooling because they are built into the ground, which keeps the temperature inside the house from getting too hot or too cold. In the long run, this helps

earthship owners lower their **utility bills**. As well, one wall of an earthship usually faces south. Therefore, **solar** heat helps to warm the house, and solar **panels** built on the roof generate electricity to run appliances in the house.

All of these features make earthships very environmentally friendly. That's one of the reasons they have become popular throughout the world. Earthships have been built in Bolivia, Australia, Mexico, Japan, Canada, England, Scotland, and all over the US. Maybe in the near future, an earthship will be landing near you!

### III. LISTENING

#### *Exam information*

- You hear one speaker giving a talk on an academic subject.
- Section 4 has no break.

**1** Work in small groups. How much do you remember about the Listening test? Say whether these statements are true (T) or false (F). If you think a statement is false, write what you think is correct.

- 1 There are 40 questions in the test: ten in each section.
- 2 You hear each part twice.
- 3 You may hear the answers in the recording in a different order from the questions.
- 4 Section 4 is harder than Section 1.
- 5 Each question has one mark.
- 6 You write your answers straight onto the answer sheet.
- 7 You do not have to spell all words correctly.

**2** Work in pairs. You are going to hear a lecturer giving a talk about traditional house design in Samoa. Before you listen, look at the picture below.

- 1 What features of the house does the picture show?
- 2 What do you think is the purpose of each of these features?

3 How do these features compare with a modern house where you live?

3 Work in pairs. Look at Questions 1–10 and decide what type(s) of word and what information you need for each gap.
