

WILL - WON'T

Read the paragraph and complete the sentences with will or won't.

CLIMATE CHANGE

In the future, climate change will continue affecting our planet a lot. It will be hotter, causing more heatwaves and glaciers melting. This will cause that sea levels rise and put regions close to the sea in danger everywhere. Sadly, some animals won't survive because their homes will disappear. But people will have to do something to reduce carbon emissions, and renewable energy will become more common. We hope these actions will control the worst effects of climate change and make a better future for our children.

1. In the future, climate change _____ keep affecting our planet a lot.
2. It _____ get hotter, causing more ice melting and heatwaves.
