C. were wrapped
D. is wrapped

16. In Turkiye, at least 25,000 people ... by the earthquake on last Monday.
- kills
 - is killed
 - are killed
 - were killed
17. People surviving strong tremors injured tell how they from debris of Monday's earthquake.
- rescues
 - rescued
 - was rescued
 - were rescued

The following text is for questions 18-20.

Guava is a plant native from Mexico and Central America, Northern South America, parts of the Caribbean, some parts of North Africa, and some parts of India.

A guava tree is not big. It is about 33 feet with spreading branches. The bark is smooth with green or reddish brown color. The plant branches are close to the ground.

Guavas are cultivated in many tropical and subtropical countries for their edible fruit. The fruit is round or oval depending on the species. It is usually green when unripe, but becomes yellow or maroon when ripe.

The flesh of the fruit is sweet or sour. The color of the flesh may be white, pink, yellow, or red, with the seeds are numerous but small. In some good varieties, they are edible. Guavas are rich with vitamins A and C, Omega-3 and Omega-6, gutty acids and dietary fibers.

18. The guava is usually ... when unripe.
- white
 - green
 - yellow
 - maroon
19. Based on the text, what does the third paragraph talk about?
- The fruit of guavas
 - The taste of guavas
 - The size of guava tree
 - The color of guava flesh
20. "... for their edible fruit" The underlined word is closest in meaning to ...
- can be eaten
 - can be edited
 - can be planted
 - can be cooked

The following text is for questions 21 and 22.

A cactus (plural:cacti) is any member of the plant family Cactaceae, native to Americas. They are often used as ornamental plants, but some are also crop plants. Cacti are grown for protection of property from wild animals, as well as many other uses.

Cacti are unusual and distinctive plants, which are adapted to extremely hot environments, showing a wide range of anatomical and physiological features which conserve water.

Cacti come in wide range of shapes and sizes. Many cacti species are night blooming, as they are pollinated by nocturnal insects or small animals, principally moths and bats. Cacti range in size from small and globular to tall and columnar.

21. What does the third paragraph tell about?
- The usage of cacti
 - The habitat of cacti
 - The advantage of cacti
 - The characteristic of cacti
22. "Many cacti species are night blooming..." is closest in meaning to ...
- performing
 - flowering
 - increasing
 - creating

The following text is for questions 23-26.

Javan tiger (*Panthera tigris Sondaica*) is an extinct tiger subspecies that inhabited the Indonesian island of Java until the mid-1970s.

Javan tigers were very small compared to other subspecies of the Asian mainland, but larger in size than Bali tigers. They usually had long and thin stripes, which were slightly more numerous than those of the Sumatran tiger.

The male's Javan tiger have body length of 248 cm and weighed between 100 and 141kg. Females were smaller than males and weighed between 75 and 115kg. Their nose was long and narrow, occipital plane remarkably narrow and carnassial relatively long. Based on these cranial differences, the Javan tiger was proposed to be assigned to a distinct species, *Panthera Sondaica*.

23. Where did Javan tiger live in?
- All around Indonesia
 - Sumatra
 - Asia
 - Java

24. How is the size of female Javan tigers?
- As small as males.
 - Bigger than males.
 - Smaller than males.
 - Smaller than Bali tigers.
25. These are the characteristics of Javan tigers, except...
- have narrow and long nose
 - have more long and thin stripes
 - smaller in size compared to Asian tigers
 - male Javan tigers usually weight less than females.
26. "Javan tiger is an extinct tiger subspecies..." the underlined word has similar meaning to...
- rare
 - unique
 - popular
 - common

The following text is for questions 27 to 30.

Chipmunks

Chipmunks are small, ground-dwelling members of the squirrel (Sciuridae) family known for their burrowing habits and love of nuts.

All species of chipmunks are native to North America, except one - the Siberian chipmunk.

Chipmunks can dig extensive burrow systems directly underneath or next to natural or manmade cover. They dig two types of burrows: shallow burrows in which they seek refuge while foraging during the day, and deeper, more complex burrows where they nest, store food and spend most of the winter months. Their average size is 5.08 until 15.24 centimeters in length. Their tail is around 7.62 centimeter longs. Their body have shades of brown/yellow/grey fur with white and black stripes down the back.

Chipmunks are omnivores, dining on various types of foods that are found mostly on the ground. Their diets are more diverse during the warmer months, during which time they hoard nuts and seeds in their burrows to eat in the winter. (Adapted from <https://www.havahart.com/chipmunk-fact>)

27. The purpose of the writer in writing the text is to inform the readers about ...
- what chipmunks eat
 - the habitat of chipmunks
 - the characteristics of chipmunks
 - the body appearance of chipmunks
28. Based on the text, we know that chipmunks...
- have short tail
 - store food for winter
 - are the same as squirrels
 - live above the ground
29. The word "underneath" in the sentence "Chipmunks can dig extensive burrow systems directly underneath ..." has the similar meaning as the word...
- on
 - in
 - of
 - below
30. The following statements are TRUE based on the text about chipmunks EXCEPT...
- the complex burrows where they sleep
 - they only dig shallow burrows
 - they can be 5.08 until 15.24 centimeters in length
 - their diets are more diverse during the warmer months
