10. They (**not, comment**) _____ on her new hair style.

IV. Read the passage and tick True or False.

A tsunami is a series of waves, which are formed in the ocean after an earthquake, landslide or volcanic eruption. The tsunami waves will increase in height as the water gets more shallow, and they can reach the same speed as jet planes of up to 900 kilometers per hour.

The tsunami waves won't slow down until they reach more shallow water or hitting landmass. They can travel for thousands of miles across the ocean, which means that the earthquake or landslide don't have to happen in the near proximity in order to be struck by a tsunami.

Whenever an earthquake, big landslide or volcanic eruption occur, a tsunami can be expected. The amount of energy released will also determine how large the tsunami will get. In addition to earthquakes, landslides, and volcanic eruptions, scientists also believe that meteorites can cause tsunamis when they hit the ground. They believe that some meteorites have caused massive tsunamis in the past, but no one has been able to witness it in modern times.

	True	**False**
1. The tsunami waves are formed in the ocean after an earthquake.	☐	☐
2. The height of the tsunami waves will increase as the water gets more shallow.	☐	☐
3. The tsunami waves will slow down if they reachmore shallow water.	☐	☐
4. The tsunami waves can't travel for thousands of miles across the ocean.	☐	☐
5. The amount of energy released can't determines how large the tsunami gets.	☐	☐
6. Scientists used to see some meteorites causing massive tsunamis.	☐	☐

V. Reorder the words and phrases to make complete sentences.

1. pulled / The / up / some / park / in / the / storm / trees /.

_____

2. fire / Did / destroy / the / completely / building / their / ?

_____

3. Some / were / forest fire / badly / animals / injured / or killed / in / the /.

_____

4. The / personal property / are / collecting / their / flood victims /.

_____

5. usually / in / Some / happen / natural disasters / mountainous areas /.

_____

6. many / volcanic eruptions / Geologists / understand / factors / that / of /the / cause /.

_____
