

The Water Cycle

evaporation	groundwater store	the process by which liquid turns into a gas	the storage of water underground in permeable rock
precipitation	condensation	the process by which any form of moisture falls from the atmosphere to the Earth	the process by which water vapour turns into a liquid
infiltration	interception	the process by which water moves downwards into the ground	the process by which plants or vegetation prevents precipitation from reaching the soil
transpiration	surface run-off	the process by which water is released from the leaves of plants and trees	the process where water moves across the surface of the land
