- B) Wings
- C) Lungs

C/ READING. (2 PTS)

I/ Read the email and answer the questions.

The Philippine eagle lives in the forests of the Philippines. Adult birds can be one meter long and weigh eight kilos. It eats small animals such as snakes, bats, and rats. It's in danger now and it's rare. The biggest problem is human activity like farming. You can find information on the website of the Philippine Eagle Foundation. It explains how to protect the eagle. For example, it's possible to 'adopt' an eagle.

Questions

1) Where do the Philippine eagles live?

- A) In forests around the world
- B) In the forests of Amazon
- C) In the forests of the Philippines

2) How heavy is an adult eagle?

- A) One kilo
- B) Five kilos
- C) Eight kilos

3) What do they eat?

- A) Insects
- B) Small animals
- C) Snakes

4) The Philippine eagle is in ... now.

- A) danger
