

## EXERCISE

This is individual work. Carefully read the expressions of agreeing and disagreeing (number 1 to 5) and five statements of opinion in Column A. Next, match them by writing in Column B: a number representing the most suitable expression of agreeing or disagreeing for each statement in Column A. After the matching activity, challenge yourself to elaborate on your agreement or disagreement based on the opinions stated in column A.

I have to say, I disagree with you.

I agree with that.

That makes sense!

That's true

I couldn't agree more.

<b>A</b>	<b>B</b>
I think digital technologies significantly help us to connect globally with youth from all over the world.	
I think not all students are aware of how digital spaces can support their personal interests.	
I guess our information and communication technology (ICT) lessons should show us how to make the best use of digital technologies for a better life.	
I argue that students should start to use technology as producers, such as to create software, not just as consumers.	
I don't agree that parents use their fear of technology, such as becoming addicted and wasting time, to prevent their kids from using social media and online spaces for learning.
