MOON PHASES			
			
5.	6.	7.	8.

3. Look and match.

It is the largest space body in our solar system.		It has more gravity. This gravity is what causes the planets to orbit or move around it in pathways.
It has no light of its own.		It is much smaller and much closer to Earth than the Sun.
It is a star, and like all the other stars we see at night, it is made up of a ball of very hot gases.		It only reflects the Sun's light.
It is very hot		It has a solid, rocky surface, but has no liquid water available.
		Its gravity is the main cause of tides on Earth.
